TRANSFORMING HOMES

A fireplace has the ability to transform any room, conveying a personal statement becoming a natural focal point. It becomes a symbol of security, contentment, and warmth. The Penman Collection presents a clearly distinctive range of fireplaces, stoves, and accessories that combines investment in design with quality materials and expert craftsmanship.

By taking inspiration from classical design themes and infusing this with contemporary design principles, we have created a variety of beautifully crafted products that will make a statement of enduring elegance in any room. Our fireplaces are available in a variety of materials and finishes that can be fitted with an extensive selection of fires which include options suitable for all chimney types.

All the stoves featured in the Penman Collection are Ecodesign Ready and the collection also includes a range of higher performing cast iron fireplaces. By utilising innovative manufacturing techniques, these products allow the use of some extremely efficient glass fronted and open fronted gas convector fires with more traditionally styled cast iron fireplaces.

The Penman Collection is available exclusively in the UK & Ireland with the help of our carefully selected network of retailers. For details of your nearest retailers, visit www.penmancollection.com

Pictured to the left is the Bassington Ecodesign Ready stove in black with Grande Legs see page 112 for details.

MANTELS

The Penman Collection is built on 70 years of experience in the fireplace industry creating luxury, stylish and functional products. Crafted from beautiful natural stone, thousands of years in creation, sourced from our quarries across the globe.

Our focus is not simply on what we make but how we make it. We pride ourselves on our quality craftsmanship, and with a team of expertly skilled staff, we only deliver the highest levels of customer service. Our aim is to provide a product of true beauty that will perform perfectly and last for many years.

The collection brings together a variety of beautiful fireplaces available in a variety of premium materials, lovingly hand crafted using traditional methods ensuring years of enjoyment from your fireplace.

CLARA PURA MARBLE

Each of these beautiful stone finishes have their own characteristics that help to create a truly unique fireplace. Luxurious and naturally detailed, Clara Pura natural marble will create a vision of timeless elegance in any home.

Clara Pura natural white marble offers a brilliant, clear and classic aesthetic, featuring exquisite detail that is rarely seen in fireplaces of this material. This is a testament to the skills of the craftsmen who are making these products with great care and attention.

IBERIAN LIMESTONE

Iberian limestone is a natural stone known for its endurance and versatility. Its sand coloured appearance and fine texture, combined with the subtle flowing swirls and grains offers an appearance that is perfect for creating a truly unique fireplace. The neutral, earthy tones are reassuringly warming and offer an enticing contrast to materials such as cast iron stoves.

AGEAN LIMESTONE

This natural, sedimentary limestone formed over 50 million years ago is cut straight from the earth. Agean limestone is a much whiter limestone with a consistent pattern throughout its surface including soft, speckled grains a characteristic of this popular and extremely hard wearing stone. This versatile material works well in a variety of settings.

MATERIALS

PORTUGUESE LIMESTONE

This natural, sedimentary limestone formed over 50 million years ago is cut straight from the earth. Portuguese Limestone features characteristic darker veins on a light background, intermingled with fossils of plants and animal life, all adding to the beauty and individuality of this enduring material.

PERSIAN LIMESTONE

Persian Limestone, a darker, grey toned version of the much loved Agean Limestone has the rare feature of appealing to both traditional and contemporary tastes. Whether creating a bold mantel centerpiece or adding some flair to a modern architectural piece, this unique material is guaranteed to catch the eye.

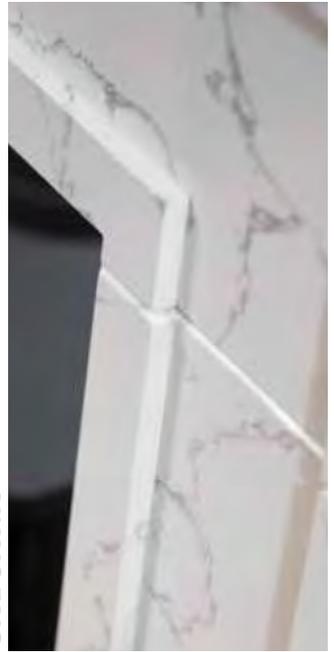

TIMBER MANTELS

The Penman Collection presents a stunning range of solid wood mantels available in several styles and finishes that will complement most interiors. These mantels are lovingly hand crafted from natural oak, designed with definitive lines that fully exploit the distinctive grain pattern to ensure a unique fireplace every time.

In addition to wooden fireplaces, the Penman Collection offers a range of handmade painted fireplaces in contemporary classic colours; Manor Grey and Parchment White.

CALCARA

Calcara Marble is a polished white micro marble, accented with a swirling, grey veining detail to produce a decidedly opulent finish. As an alternative to pure marble, micro marble captures the essence of this beautiful material by using finely crushed pieces of real marble bonded together using resin to create a smooth and durable, designed surface that features consistent colour tone and detailing.

54" MANTEL

Portuguese Limestone

With strong, bold lines and a carved, curved profile, the Arlington suggests a bold aesthetic that perfectly frames the flickering movement of any fire.

Shown here with a Meystone slate back panel and hearth along with the Sandon electric fire in black chrome finish. For alternative gas & electric fire options, see page 86 onwards.

Fire: Sandon Electric Fire in Black Chrome Finish
Hearth & Back Panel: Meystone Slate

ARLINGTON

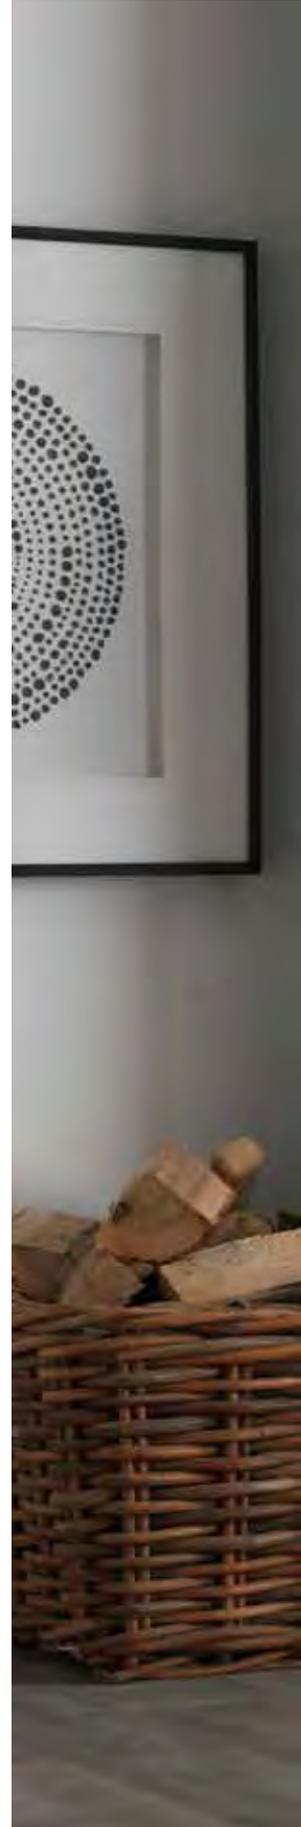

57" MANTEL

Agean Limestone

The Avellino, with its sumptuous curves and bold profiles, takes full advantage of the natural beauty of Agean limestone, creating dramatic shadows and highlights.

Shown here with the Bassington gas stove. This stove builds on the success of the multi fuel stove version, the Bassington Gas has been designed and manufactured in the UK and offers an ultra-realistic ceramic log fuel bed. Available in either manual or remote control in both natural gas and LPG options. The new Bassington Gas Stove is available in black or warm white enamel with the choice of three leg options; Standard, Skirted or Baseline.

Insert: Bassington Gas Stove
Chamber: Dove Grey Chamber
Hearth: Agean Limestone Hearth

AVELLINO

58" MANTEL

Agean Limestone

The Aversa is influenced by early Georgian design principles, paying close attention to lines and proportions to create a strong, yet elegant frame.

Accompanied here by the 60CF appliance which offers an output of up to 5.1kW and boasts efficiencies of 72%. This large glass-fronted fire allows an unrestricted view of the unrivalled realistic fuel bed and beautiful flames. The 60CF will fit perfectly with virtually all interiors. For that extra WOW factor, there is also an option to upgrade to a black mirrored glass lining for the fire chamber which offers a remarkable effect of added depth and detail. For alternative gas & electric fire options, see page 86 onwards.

Insert: 60CF Conventional Flue Gas Fire
Slip Set: Natural Slate
Hearth: Natural Slate Hearth and Back Hearth

AVERSA

58" MANTEL

Agean Limestone with Clara Rosa Inlay

Here, the stunning Agean limestone Aversa is enhanced by the addition of inlaid panels, crafted from natural Clara Rosa marble to create a perfect contrasting aesthetic.

Pictured here with the Bassington Compact which is perfect for most room sizes and has an output of 5kW, meaning there is no requirement for additional room ventilation. See page 110 for details. Shown with the charcoal slate waterfall chamber, granite hearth, back hearth, and slips.

Stove: Bassington Compact Baseline Leg
Chamber: Charcoal Slate Waterfall
Hearth and Slips: Granite

AVERSA ROSA

51" MANTEL

Agean Limestone

Inspired by its larger namesake, the Aversa 51 follows all of the design principles and maintains the classic balance of the standard Aversa mantel but offers a more compact form. This 51" mantel is perfectly proportioned to work in combination with any of our 16" gas and electric fires.

Pictured here with a honed granite back panel and hearth with Sandon electric fire in champagne finish. For alternative gas & electric fire options, see page 86 onwards.

Fire: Sandon Electric Fire in Champagne Finish
Hearth & Back Panel: Honed Granite

AVERSA

58" MANTEL

Solid, Natural Oak

This beautiful mantel is built using solid, natural oak with a hand oiled finish to perfectly exhibit the rich grain and natural beauty of this stunning material.

Pictured here with the Apollo slide control glass fronted gas fire with ceramic coals, honed granite hearth & back panel. For alternative gas & electric fire options, see page 86 onwards.

Insert: Apollo Glass Fronted Gas Fire

Hearth: Slabbed Granite Hearth

AVERSA PURA

57" MANTEL

Iberian Limestone

This Tudor inspired mantel features oversized legs to create an impressive bold extravagance and give a unique sense of depth to this timeless design which exudes a strong yet elegant presence.

Accompanied with the Bassington stove in warm white enamel finish and baseline leg option. Featuring the Olive Waterfall chamber and Iberian limestone hearth & back hearth, The Bassington is also available in black please see page 114.

Insert: Bassington Stove with Baseline Leg Option
Hearth: Iberian Limestone
Chamber: Olive Waterfall

BEAUFORT

54" MANTEL

Calcara Marble

The Brooksby mantel offers a refreshing approach to fireplace design with clean, simple, geometric lines and the flowing, organic veining of the white Calcara marble. This contemporary classic will certainly create a truly unique focal point to your living space.

Accompanied here with the Bassington Gas stove one of the most realistic gas stoves on the market. This beautiful gas stove has been designed and manufactured in the UK and offers an ultra-realistic ceramic log fuel bed, available in either manual or remote control in both natural gas and LPG options. The Bassington gas stove is available in black or warm white enamel with the choice of three leg options; standard, skirted or baseline. See page 114 onwards for details.

Insert: Bassington Gas Stove with Standard Leg Option
Hearth: Polished Granite
Chamber: Staggered Black Slate Block Chamber

BROOKSBY

54" MANTEL

Natural Oak

The perfect proportions and bold lines of the Calabria mantel bring a contemporary twist to the classic Opus cast iron insert, allowing this striking centerpiece to sit comfortably in almost any style of home.

Shown here with the Opus cast iron insert in highlight finish. This stunning cast iron insert featuring a large arched opening for a perfect view of the fire is influenced traditional Georgian style, its classical features will effortlessly fit in with a variety of decorating styles. The Opus cast iron insert comes in full polish, highlighted & black finishes.

Insert: Opus Cast with decorative gas fire and ceramic coals
Hearth: Slate Hearth

CALABRIA

36" COMBINATION CAST

Combination Mantel

The Catalan features a simplistic design, its straight-lined framing offering a classic appearance that would be suitable to any home. Due to its size and design it is an ideal choice for a bedroom or in smaller rooms of a household. The Catalan is available in a choice of polished or black finishes.

Hearth: Granite Hearth

CATALAN

56" MANTEL

Agean Limestone

Perfectly proportioned, simple and elegant, the Cortese in Agean limestone will add an intentionally understated beauty to any room.

Featuring the Kirkham Stove this Ecodesign stove combines stunning design with the latest in emission reducing technology, creating one of the cleanest burning stoves available. See page 128 for details.

Insert: Kirkham Stove
Chamber: Staggered Black Slate
Hearth: Natural Slate

CORTESE

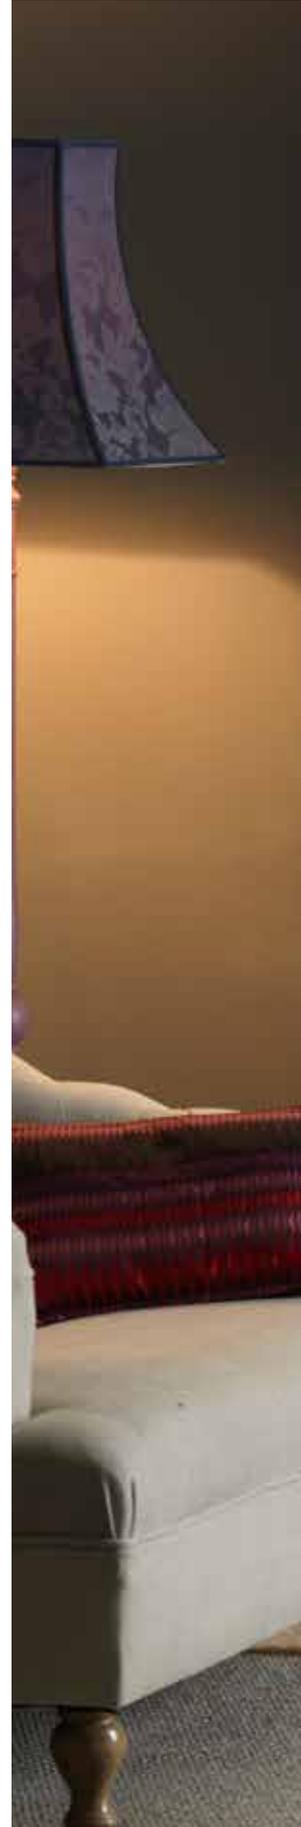

54" MANTEL

Portuguese Limestone

The simple elegance of this Tudor styled mantel shows off the delicate symmetry and styling. The majestic arch allows for optimum admiration of this grand limestone mantel.

Accompanied here by the Vega 200SL. This Ecodesign Ready stove is approved for burning wood in a smoke control areas and is protected with a Lifetime Warranty for added peace of mind. The Vega Edge 200SL is also available in Warm White Enamel. See page 142 for details.

Stove: Vega Edge 200SL Stove
Chamber: Portuguese Limestone Tiled
Hearth: Portuguese Limestone with Back Hearth

DELAMERE

54" MANTEL

Parchment White

The classically styled Gallio mantel is given a contemporary twist with the flawless manor parchment white finish.

Shown here with a natural honed granite back panel and 54" hearth with the Sandon electric fire in gold black finish. The Gallio mantel is also available in Manor Grey finish, see page 80 for details. For alternative gas & electric fire options, see page 86 onwards.

STOVES

The Penman Collection boasts an impressive range of stoves in a variety of fuel options such as wood, multi fuel and gas. As well as featuring popular favourites such as the Sigma, Scene and the Vega range of stoves. It is also home of the Bassington Stove voted the Number 1 Eco Stove by The Telegraph. Our stoves offer a truly comprehensive choice for all tastes and functions.

Every stove in the Penman Collection has been expertly designed by our team of specialised designers, engineers and produced with expert craftsmanship and quality materials. Whether it's cast iron or steel, each appliance is independently assessed and tested by an accredited association to ensure you will have years of satisfaction with your purchase. All our Ecodesign Ready Stoves come with a lifetime guarantee*

Our stoves are only available through carefully selected retailers throughout the UK & Ireland. They are available to offer help and advice about choosing the right stove for you.

To locate your nearest Penman Collection dealer, please visit our website at www.penmancollection.com/find-a-retailer/

*Subject to terms and conditions please see www.penmancollection.com for details

READY TO BURN

Whilst we continue to develop new and enhanced products to improve efficiency and clean burning, it is the critical issue of wood fuel that plays the biggest role in the air quality solution.

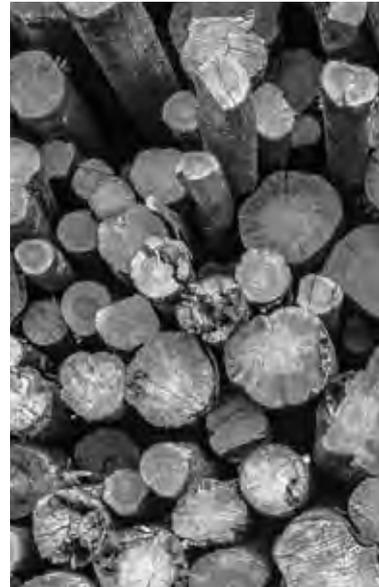

Burning wet wood is inefficient as it demands a lot of heat to vaporise the water before the appliance can give out the proper level of heat to the room, hot water or heating systems. In turn, this creates a lot of smoke which damages the chimney blackens the appliance and contributes to air pollution. Dry wood that has been properly sourced and seasoned means it produces fewer particulates, more heat efficiency and less maintenance. Chimneys are less likely to block and will remain easier to sweep.

The government-backed Ready to Burn scheme is compliant with EU timber regulations and will set a benchmark for logs and other wood fuels in the UK to help with identifying wood that has been carefully chosen and ready to burn.

For more details and to find your nearest stockist visit www.woodsure.co.uk/are-you-ready-to-burn

*“A stove is only as good
as the wood it burns.”*

ECODESIGN READY STOVES AND AIR QUALITY

Ecodesign Ready Stoves in accordance with the Government's clean air strategy are designed to reduce emissions by burning wood more efficiently taking into account the long term environmental impact of the appliance during its whole lifecycle.

Only appliances that have been tested and verified as meeting these new limits will be able to be sold and installed legally within the UK.

The emission limits include those for Particulate Matter (PM), Organic Gaseous Compounds (OGC), Carbon Monoxide (CO) and Nitrogen Oxides (NOx).

SIA Ecodesign Ready stoves will meet the new regulation which came into force on the 1st January 2022. All of the stoves featured in the Penman Collection are Ecodesign Ready, pledging our support to a greener sustainable future in order to further reduce the impact of climate change.

CLEAN BURN

In parts of the UK the burning of smoke producing fuels is prohibited by the Clean Air Act.

We have a comprehensive range of stoves approved for use in smoke controlled areas, allowing them to burn wood and smokeless fuels in any part of the country.

FARMHOUSE HEARTHS

Inspired by country style decor and living, this textured limestone with its appearance of slate is warm and cosy in appearance but strong and robust in character. Honed with chiselled edges, it is blue grey in colour and looks rustic and antique in appearance. Strive to create something a little more interesting! When it comes to the layout of your hearth, you can get much more striking design with these modular multi sized pieces enabling you to produce a modular design to your specifications. With a variety of different size options for front and back hearths to suit most fireplace requirements, it's a fantastic alternative to traditional granite or slate.

All Farmhouse products are sold as individual components. Your retailer will be able to advise what best suits your requirements.

TECHNICAL INFORMATION

CHIMNEY TYPES

Once you have chosen your perfect fireplace it's time to decide on what type of fire best suits your needs. The first thing to do before making your decision is establish your chimney type. Your type of chimney will determine which fires are suitable for your particular application. The table below details each of our fires, their respective fuel sources and chimney type compatibilities.

CLASS 1

Commonly in older houses, earlier than 1960. The Class 1 chimney is identifiable by 7" (180mm) or greater diameter flue. The existing chimney must be structurally sound, please check before the installation of a new fireplace.

CLASS 2

Either an older house where the existing chimney has been lined by a proprietary steel flue or a newer house with a steel flue built in. This chimney type is identifiable by a 5" (130 mm) diameter flue and a steel flue terminal.

PRE-CAST FLUE

Modern houses generally later than 1960 often have a pre-cast concrete chimney system, identifiable by a rectangular box section flue and a terminal, as illustrated in the picture.

NO CHIMNEY

Modern houses often have no chimney. You can use a modern decorative electric fire, either with no heat for aesthetics or an efficient fire with up to 2kW heat output.

FIRE TYPE	CLASS 1 CHIMNEY	CLASS 2 CHIMNEY	PRE CAST	NATURAL GAS	LPG	NO CHIMNEY REQUIRED

- **** Selected products available in balanced flue options
- ***** Can be installed to a twin wall flue system

Please note, this information is provided as a guide. Please check the appliance instructions for details of the installation requirements.

INSET FIRE TYPES

HIGH EFFICIENCY
GLASS FRONTED

Featuring a glass fronted, full depth ceramic coal fuel bed, these engines are the most efficient of all fire types. A Class 2 slim line version also is available for Gallery fires.

CLASS 1 OPEN
FRONTED CONVECTOR

A full depth fire suitable for Class 1 chimneys. Convector fires offer greater efficiency ratings than standard open fronted fires. Manual or side control options available.

CLASS 2 OPEN
FRONTED CONVECTOR

This fire type has the same features as the Class 1 version but with a reduced depth to suit a Class 2 chimney type. This is normally indicated by a more shallow fuel bed.

DECORATIVE
GAS FIRE

A full depth fire suitable for Class 1 chimneys. The key difference with this type of fire is that it does not feature a canopy and produces radiant heat only.

60CF GAS FIRE*

The 60CF will fit perfectly with virtually all interiors.

*Fire not shown to scale.

INSET ELECTRIC
FLAME EFFECT FIRE

Introducing the NEW inset electric fire featuring our latest innovative multi-colour way flame technology. This versatile fire has an impressive range of up to 2kW heat output and is available with a range of contemporary and traditional trims to choose from.

CLASS 1 GLASS FRONTED GAS FIRE	382	190	541
CLASS 1 OPEN FRONTED GAS FIRE	401	240	552
CLASS 2 OPEN FRONTED GAS FIRE	333	140	542
INSET ELECTRIC FIRE	390	75	544

INCLUDED AS STANDARD: ADDITIONAL EXTRAS:

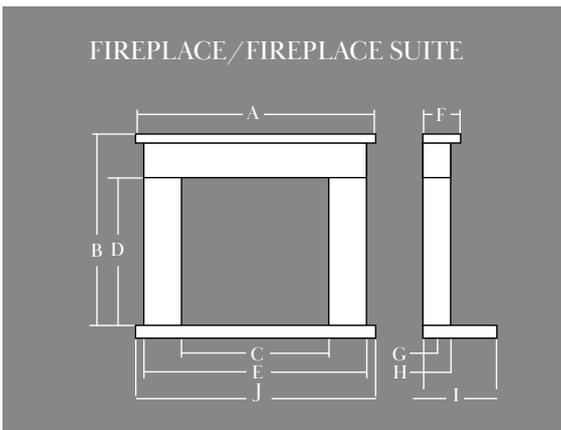

- Hi definition logs
- Flat steel chamber
- Lamel chamber panels
- Black glass chamber panels
- WiFi Kit
- Anti-reflective glass

* If halogen feature lighting is chosen then the rebate is reduced to 25mm. All dimensions are provided as a guide only and are subject to a tolerance of +/- 12mm. Before committing to a fireplace, please discuss your particular installation with your retailer. Falkirk and opus inserts are suitable for most fuel types, but polished and highlighted finishes may tarnish when burning solid fuel.

Due to manufacturing processes, all measurements are approximate but may vary slightly. Please allow for a tolerance of plus or minus 12mm. It is essential that your stove is installed in accordance with Building Regulations and any other standard requirements by a competent person with experience in fitting fireplaces - your retailer will be able to help you select an appropriately qualified installer.

* Only wood and smokeless fuels may be used in smoke controlled areas.

Concentric flue required for balanced flue stoves. See your nearest dealer for more information.

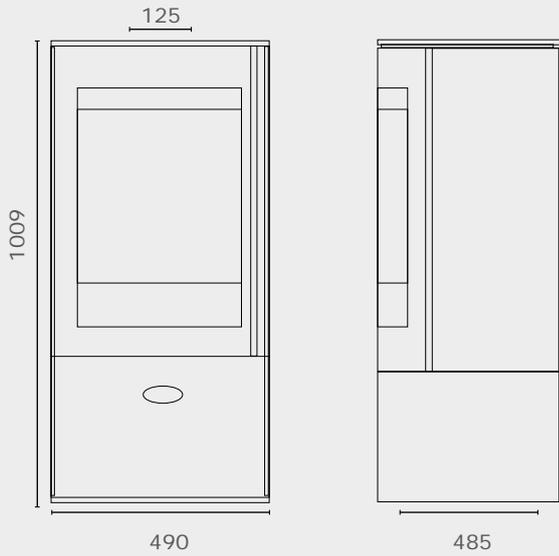

† See stove output range below

†* A range of outputs for this stove has been quoted. The stove is tested and approved at 5kW at an independent laboratory. It is possible to burn the stove at outputs within the range specified. If it is intended to burn this stove at outputs over 5kW, then permanent external ventilation is required in accordance with Document J of the Building Regulations – please seek guidance from your retailer.

CAST IRON

All the cast iron products are delivered with a protective, oil-based coating on polished surfaces. This should be cleaned off during the installation. It is recommended that a spray-type oil is applied from time to time in order to avoid surface rust appearing. Ensure that the room in which the cast iron product is being installed is thoroughly dry. For example recently plastered walls cause high levels of moisture in the atmosphere and, as a result, rust is likely to occur. Under no circumstances should a water-based cleaner or polish be used to clean cast iron products.

It is your responsibility to burn smoke free fuels if you live in a smoke free zone. There are some very high temperature burning fuels which can cause damage to any fireplace. Please refer to the Solid Fuel Association (www.solidfuel.co.uk) recommendations and use an approved coal merchant as your supplier.

No responsibility can be accepted if high temperature fuels have been used or if there is excessive draft. If in doubt we recommend the use of a clay fire back. Clean ash away regularly as a build up beneath the fire will cause the grate to burn out quickly. The grate is a consumable part of your fire and will need replacement from time to time, depending on the frequency and burning temperature of your fires.

AFTERCARE & MAINTENANCE

CERAMIC FUEL BEDS

When using ceramic fuel beds, ensure that these do not touch any of the polished surfaces in order to minimise the risk of thermal discolouration. The ceramic black and graphite products are coated with a high temperature paint and during their natural burning lifecycle eventually the paint can burn off, exposing the raw material. To restore the finish a proprietary, high temperature paint can be used to re-coat the product and this paint is available from your local retailer.

LIMESTONE

Limestone is a naturally porous sedimentary rock, therefore it is important not to spill any liquid types especially liquids of colour as these can often leave a prominent stain. In the event of a spillage, our best advice would be to contact our technical team for guidance. In the event of any damage occurring by way of a chip or a minor scratch then a fine wet and dry sand paper can be applied with care in order to achieve the best results.

Limestone products, once installed and dry should be cleaned and sealed where necessary using Gallery Collection aftercare products. Your installer should carry out the initial sealing where applicable.

The stone mantels pictured are manufactured from 100% natural material. As such the mantel you will purchase will be unique due to the inevitable variations in fossil formation, veining and colour. This is one of the great attractions of 100% pure natural products. Please be aware that small fossils and variations in the limestone are part and parcel

MARBLE

Marble & Micro Marble has a surface that is extremely durable however liquids which have a strong acidic content for example citrus juices may attack and discolour the surface therefore care must be taken with any spillages of this nature. In order to maintain its subtle shine and appearance, occasionally spray with a general household polish and buff with a soft dry cloth. Do not use any bleach or abrasive cleaning agents, as these could damage the surface or dull the appearance of the material.

GRANITE

Marble and granite hearths are a beautiful investment and as such require regular maintenance and care to continue looking its best. Care must be taken when lighting candles to avoid spilling wax on the surface and the heath must be protected when placing tea lights. Our best advice is to clean up any spillages as soon as they happen, as the porous surface of a granite or marble can mean that stains can happen quickly, therefore it's important to remember to soak up a spill with a clean dry cloth or sponge whenever they happen. By wiping the surface down with a warm damp cloth and then use a soft dry cloth to buff to a shine depending on the finish, when you're tidying your home, will enable you to keep it looking pristine.

NATURAL WOOD & VENEER

When caring for your elegantly crafted wood or wooden veneered mantel and in order to maintain its beautiful appearance, regular cleaning should be completed with a soft cloth using a mild household cleaner or polish. Water and ammonia based cleaners should be avoided, water can sometimes be absorbed into the wood and damage the surface, in some extreme cases this can cause the veneered wood to separate from the surface beyond repair. Ammonia based products can attack the protective lacquered coating and cause a dull cloudy appearance if used, it will also detract from any emphasis on the natural grain of the wood.

TEXTURED MARBLE

Extensive tests prove textured marble to be virtually stain and scratch resistant. If minor scratches occur then please use the small touch up kit supplied. If spillages occur then use a soft, damp lint-free cloth immediately to wipe away the spillage.

GENERAL

All the gas fires we supply are tested in accordance with CE requirements and are CE marked. Due to the manufacturing processes all measurements are approximate and may vary slightly so allow for a tolerance of plus or minus 12mm.

In order to achieve some of the colour options, we plate the products using a variety of manufacturing processes. When we state that a product is “Antique Brass finish” or “Chrome finish” there is no intention to mislead. The products are not brass or chrome respectively, they are simply plated to give that effect.

The colours shown in the brochures are as accurate as possible, but if the colour you require is critical then please consult your retailer before basing all your decisions on the colours shown here.

Your home may have a chimney type which will allow you to choose any of the fireplaces shown in the brochures. However, please consult the selection charts in the brochures and if you are not clear please consult your HETAS or GAS SAFE REGISTER (Board Gais in ROI) registered installer or your retailer.

In the unlikely event that there is a defect in any of the products shown in this brochure, then a replacement will be supplied without hesitation. Of course, this requires the products to be fully inspected prior to installation as no responsibility for re-fitting or redecoration can be accepted if defective products have been installed. In this case and in the case of accidental damage after installation, in-situ repairs can be made by specialists, subject to prior agreement of terms with your retailer.

Please also note that shading and crazing are characteristics of the glazed tiles used in tiled inserts and tiled hearths.

There are occasions when designs, or products are altered or discontinued without prior notice (a reserved right), so if you are about to set your heart on a particular fireplace, please consult your retailer before making that final commitment.

ADVICE BEFORE YOU COMMIT TO THE INSTALLATION OF YOUR PENMAN COLLECTION FIREPLACE.

BROCHURE PHOTOGRAPHY

All the images throughout this brochure are for illustrative purposes only. The colours shown in the brochure are as accurate as possible, however some natural materials may vary due to the nature of the products. Some room sets may appear not to comply with the requirements of the latest building regulations, we would always advise that you check your proposal with your approved fitter before proceeding with any project.

DISCLAIMER

The brochure was correct at the time of printing, we reserve the right to change or withdraw details, prices or specifications without prior notice. Every effort has been made to ensure the accuracy of information in this brochure. All dimensions are given for your convenience and should only be used as a guide. Colour reproduction is as accurate as current printing methods allow. We cannot be held responsible for changes or matters outside our control.

INSTALLATION

Your Penman fireplace is made up of a number of different components and it is important to ensure that your installer has the necessary qualifications and experience to fit ALL the components of a fireplace.

All Penman appliances are supplied with detailed, comprehensive installation and user instructions. All installations must be in accordance with the manufacturer's instructions, current building regulations and subsequent British standards. The installation should only be carried out by a qualified competent persons. For all gas appliances, a Gas Safe registered engineer and for solid fuel, a HETAS registered engineer. Failure to comply with these requirements may render the appliance unsafe in the first instance, impede on the efficiency and serviceability of your appliance and ultimately invalidate any warranty.

All installers in order to satisfy the terms and conditions of our warranty must be registered with the appropriate regulating bodies as deemed by Percy Doughty. All gas installers within the UK must be registered with the Gas Safe Register. In the Republic of Ireland the Board Gais and for solid fuel installations all installers must be registered with HETAS and for Scotland be compliant with the current Technical Handbook – Domestic.

It is important that you retain all documentation following the installation as this will be required in order to activate the warranty if needed. The documentation should be supplied by building control following successful registration of each installation by the installer, for both gas and solid fuel appliances together with any commissioning certificates, benchmarks and service records completed in the rear of the installation manual. It would be the responsibility of the installer to provide all the necessary information, however in some circumstances where documentation is absent then communications with your local building control officer may be beneficial, for solid fuel installations only.

When installing any Granite, Slate or Limestone hearth please ensure the area is flat and free from debris and dust, preferably to be situated on a concrete sub hearth. We would also recommend that the under surface only is primed/sealed with a suitable PVA glue or equivalent and left to dry sufficiently, prior to bedding down. The hearth would then need to be bedded down on a strong sand and cement bed with a medium consistency, taking into account the need to fill any voids, spaces and support points to accommodate the safe functioning of the whole installation when completed. We would also advise that when installing the mantel, always prime and seal the under surface that will come into contact with any adhesive or water based mixes. Failure to adhere to the advice given may result in moisture patches appearing that may stain and damage the material, these effects may be irreversible and render the installation unfit for purpose.

Marble is not suitable for solid fuel applications. The colours shown in this brochure are as accurate as possible. If the colour you require is critical then please consult your retailer before making your decision.

When you are identifying your chimney please see page 145 in the brochure. If you are not clear please consult your HETAS or Gas Safe Registered (Board Gais in Republic of Ireland) installer or your approved stockist.

Gas fires within The Penman Collection with a gas input of 6.9kW or less do not normally require additional ventilation, however there are some circumstances where additional ventilation may be required. This would be determined by your installer when completing a survey before installation. For appliances with an input of 6.9kw or over, please ask your retailer for further information on the additional ventilation requirements.

When fitting a decorative gas fire within a basket the manufactures instructions and current British standard BS 5871 Part 3, must be followed, and in doing so a risk assessment must be completed by the installer to ensure that a sufficient gap is provided around the basket when placed inside the builders opening or purpose built fire chamber. This is essential for the adequate service and future maintenance of the appliance and also allowing for good access to the controls. It is also important for air flow cooling around the appliance basket, which would also allow for the best possible flame picture. It is also an important consideration to ensure the correctly rated materials have been used within the builders opening or purpose built chamber.

Your new gas appliance will require an annual service and maintenance but not limited to, dependent on use. It is a requirement of the warranty that this is carried out by a qualified competent person registered with the appropriate regulatory body as deemed by Percy Doughty. In doing so will help you enjoy many years of trouble free usage of your appliance.

- All cast iron products are manufactured in ISO 9002 accredited manufacturing facilities.
- All the gas fires we supply are tested in accordance with CE requirements and are CE marked.
- All measurements are approximate and may vary slightly so allow for a tolerance of plus or minus 12mm.
- To achieve some of the colour options, we plate the products using a variety of manufacturing processes. “Antique Brass finish” or “Chrome finish” are not brass or chrome.
